BABIES & DHA

A smart supplement for babies and children is DHA. Research shows that Omega 3 fatty acids boost a baby's brain development and are good for children of all ages. Below are some of the many benefits.

Unborn Babies: DHA during pregnancy can increase a child's IQ by age 4

Newborn to 6 months: better hand eye coordination at 2 years

6 months to 2 years: DHA jump starts the production of a hormone that's crucial for brain development during this time of rapid growth

Kids 2 years to 5 years: Low levels of DHA in children have been linked to an increased risk of ADHD, vision problems and depression

Don't miss out on supplementing DHA for your baby or child. It is incredibly beneficial for growing babies and ensures healthy development of the brain.
